

Cleaning/Maintenance

Poly-Wood® furniture is made of High-Density Polyethylene (HDPE) plastic resin that has been purified and UV protected. It is generally cared for and cleaned with soap and warm water. For certain stains and additional cleaning power, a 1/3 bleach and 2/3 water solution can be used without affecting the color. Also, a popular method of cleaning is a high-pressure power wash. (Not to exceed 1,500 psi.) The surface characteristics of the product may require the use of a soft bristle brush to get into the creases.

The hardware used in the assembly and construction of our furniture is a 300 series commercial grade stainless steel, much of which has an additional Xylan® protective and cosmetic coating. Although the quality of the hardware has a high level of corrosive resistance, the hardware can show some sign of corrosion, especially in salt air environments. A practical solution to these signs of corrosion would be to wash the product with soap and warm water frequently. Use a soft bristle brush to scrub the corroding areas of the hardware. Also, appliance touch up paint may be used in the appropriate color to protect the hardware. Appliance touch up paint can be purchased at local hardware stores.
