**INFORMATION ON EVAUCATION CRIBS FROM L.A.BABY (8/9/13)**

**ALL OF OUR METAL COMMERCIAL CRIBS PASS THE ASTM COMMERCIAL CRIB STANDARD 1208.**

**While there are no tests for an evacuation crib, the commercial crib standard is a good indication that any crib that passes this standard can be used in an evacuation.**

**The commercial crib standard has a more severe test for evacuation and for the strength of the crib.**

**The ASTM 1208 threshold test is in paragraph 6 of the test: it requires that the crib take a load of 180 lbs while the CPSC 1220 requires only 80 pounds.**

**To pass ASTM 1208 the crib also must go over a 1 1/4" wide gap 500 times without getting stuck in a gap of 1-1/4 in. (3.2 cm) wide between their edges. The gap shall be a minimum of 1" (2.5 cm) deep. The edge radius of the planes shall be a maximum of 1/16" (1.6 mm).**

**Passing ASTM 1208 shows that while any crib that passes CPSC 1220 can be used in a commercial environment, all cribs that pass ASTM 1208 are better suited for use in commercial environments and can be used for evacuation since it holds 180 lbs and will go over the 1 1/4" gap**

**The following metal cribs pass ASTM 1208 and are evacuation cribs:**

**Metal Cribs 582, 72, 8510, 82, 882, 884 and 990.**

**The following wood cribs are evacuation cribs with the addition of the 504 metal frame:**

**Wood cribs 510, 530, and 560.**

**To view the compliance info on all of our cribs please see attached.**
