BEAUTIFUL · DURABLE · RENEWABLE

TERAGREN: SETTING THE BAR FOR PRODUCT PERFORMANCE & DESIGN

Bamboo has been used as a building material worldwide for generations. It offers a tensile strength greater than steel, withstands compression better than concrete, and is more resistant to moisture than hardwoods. These inherent qualities, however, can only be taken advantage of with a proper harvesting and manufacturing process. The quality of the product you receive depends entirely on the care taken by the manufacturer.

With 20 years of experience behind us, Teragren employs both raw material selection techniques and our fine-tuned manufacturing technology to create high-quality bamboo products that are harder and more stable for lasting performance.

"I had many samples of various woods and bamboo and I literally beat the daylight out of each. The Teragren bamboo was just as strong as the Brazilian hardwoods I was looking at, and just as pretty."

– Homeowner, Leah DeAngelis

Finding Your Perfect Floor – 3 Easy Steps

1 Start with Style

Teragren offers 2 different basic designs. Our traditional PureForm™ floors offer a classic “bamboo look”, while our Xcora™ strand bamboo floors feature a hardwood look-alike grain pattern. Review the specific colors available within each of these Product Families and decide what is going to work best for your design needs.

2 Practical Considerations

Teragren flooring, just like any hardwood flooring, comes in both a solid and an engineered platform. One of these platforms may be a better fit for you depending on factors such as geographical location, type of sub-floor and whether or not the floor needs to work in the basement. Another important practical consideration is how you plan to install the floor. Flooring can be installed by nailing, stapling, gluing or floating, but not all options work with all floors. Best practice is to consult your contractor or flooring installer on what the needs are for your particular project. Once you know what you need, you can make an educated selection.

3 Fall In Love

Now comes the best part. Once you have landed on a basic look and narrowed your options down based on practical considerations, all that's left is to find a floor that you love. Color is important of course, but there are also various textures available, different lengths and widths to choose from, and unique finishes for different lifestyles. Go ahead and explore your options, we know you're going to find that perfect fit.

XCORA®

The hardest hardwood – Teragren's revolutionary Xcora strand bamboo flooring is 160% harder than oak. These floors offer hardness, durability and stability that are perfect for high-traffic areas in both residential and commercial settings.

Portfolio Collection • Synergy® MPL/One • Visions

PUREFORM™

Where it all began—our original style known as the PureForm line is still popular today. At 40% harder than oak, these floors are a great fit for a family or an office.

Craftsman II • Signature Naturals

ENGINEERED

Teragren's engineered flooring is made of multiple layers of bamboo and/or wood, with a beautiful bamboo wear layer on top featuring either our Xcora or PureForm bamboo. Engineered floors tend to be more dimensionally stable than solid floors—meaning that they expand and contract less.

Studio • Synergy Wide Plank • Vantage II

PORTFOLIO COLORS

SOLID WIDE-PLANK XCORA® FLOORING

160% Harder Than Oak / 94% Biobased Product

PORTFOLIO COLORS Darby Brown

Featuring 10 distinctive styles that include a variety of texture and grain options, a floor from the Portfolio Collection can ground your space, laying the foundation for further design, or be a design statement all on its own. Each floor brings a completely unique look from rustic, to sophisticated, to strikingly modern.

-  72.44" x 5.43" x 0.47" (12mm)

An all around classic, the natural fiber visual of this floor provides a warm foundation for the design of any space, and the Sculpted finish option features enhanced texturing, for a slightly rustic or aged look. Featuring a tongue and groove profile for flexible installation that offers both residential and commercial versatility.

Color Variation

SYNERGY® WIDE-PLANK

ENGINEERED, WIDE-PLANK XCORA® FLOORING

160% Harder Than Oak / 94% Biobased Product

SYNERGY® WIDE-PLANK Brindle

This dramatic, square-edged wide-plank floor can't help but make a statement. Its clean, crisp lines combine with the hardwood look-alike grain of our Xcora strand bamboo for a bold, upscale look. Additionally, this self-locking floor can be floated over cork or other acoustical suppression underlayments for an enhanced sound barrier.

Characteristics of Teragren Bamboo

Teragren bamboo is a natural product. Just like exotic hardwoods and other wood flooring, our bamboo products exhibit color variation between boards that is a direct result of natural color variation within the bamboo culms. As a result, no two planks are exactly the same.

The natural inherent color variation and subtle tones of Teragren products can be viewed as a design advantage, where installers can deliberately arrange specific boards in each floor to create a beautiful design statement that embraces the character of the hardwood flooring. Alternatively, to play down the color variation, floors should be racked prior to installation so that color can be distributed evenly throughout the finished floor—resulting in a more consistent look.
