

CRYPTON® Super Fabrics

Crypton fabric is the latest in a patented fabric process that offers permanent stain, water, bacteria, mildew, and odor resistance. Med-Lift was the first in the industry to offer this fabric on our full lift chair line. There is a breathable moisture barrier permanently integrated into the fabric. Now, no one has to sit on hot vinyl for moisture protection. No liquid will ever penetrate the fabric into the foam seating.

Tested. Trusted. Proven Results.

Crypton is engineered to be different than any other textile solution in the world. Discover the reasons why major international corporations such as Marriott, Hilton, Carnival Cruise Line and McDonald's prefer the return on investment they can find only with a Crypton product.

Innovation Comes Standard

Crypton is the only textile solution offering permanent stain, moisture, mildew, bacteria and odor-resistant protection. We know this because we invented the technology that makes it all possible.

Now 16 years later, we continue to test and improve our chemistry in an effort to deliver a formula that's better for the environment and is capable of meeting the extreme durability and long-term performance standards promised by a Crypton product. These formulations are developed, blended and tightly controlled in our Kings Mountain, North Carolina, facility that has earned accreditation from SCS and Sterling Planet.

Today, we work closely with American mills to create fabrics woven to meet every superior industry performance standard ... and do all of this without sacrificing the style or functionality your clients demand

CRYPTON® Super Fabrics

Products

Introducing the Crypton Line-Up of Cleaners, Protectors and Equipment

Crypton Stain Remover – Purple

Designed to remove ink, grease, oil, rust, tar, shoe polish, butter, cosmetics, crayon, gum, ink, iodine, lipstick, mayonnaise, red drinks and more from all fabrics with a W or WS cleaning code.

Crypton Stain Remover – Gold

Designed to remove food and beverage stains such as beer, wine, milk, vegetable oil and powerful enough to remove grass, blood, mildew, urine, vomit and latex paint stains.

Crypton Disinfectant & Deodorizer – Green Label

Safely disinfect and deodorize Crypton fabric and help prevent mildew with a neutral pH disinfectant that is safe for all textiles. On fabrics other than Crypton barrier fabrics...it can be used safely and effectively to remove odors while refreshing the fabric surface. Hospital approved, and bears an EPA and DIN registration number. Crypton disinfectant can knock out an impressive list of micro villains, another factor that makes these products popular in places like hotels and hospitals. E. coli, hepatitis, salmonella, HIV, influenza, staphylococci like MRSA and VRSA, herpes simplex 1 and 2, mold, mildew -- taking a deep breath -- streptococcus, parvovirus and canine distemper are just some of the many germs and viruses Crypton's disinfectant kills. As the first fabric EPA-certified as disinfectable, you're probably beginning to see why odor-resistance is just another perk of Crypton fabrics.
