# CENTRAL BRASS INSTALLATION INSTRUCTIONS

**NOTE:**  
Faucets supplied without hose and spray should be flushed with only the aerator removed.

1. Remove locknut from hose guide and place through proper hole in sink. Re-assemble locknut on shank and tighten.
2. Insert hose end of spray hose assembly down through hose guide then up through center faucet hole in sink. Attach to threads of nipple from the bottom center of the fixture body. **Tighten by hand to finger tight + 1/4 turn max.** If need be, diverter assembly can be held through spout hole with a 3/8 hex wrench while tightening hose. Ensure that diverter assembly does not back out and break O-Ring seal.
3. Apply a thin coat of soft plumbers putty to the bottom edge of the faucet body, place the faucet shanks thru the holes in the sink. (Handles indexed cold on right side, body marked on bottom front for those without handle indexes).
4. Attach steel washer and locknuts and tighten. Connect hot water supply to left side and cold water supply to right side. Tighten coupling nuts securely.
5. Remove aerator (if needed) from spout and install on to body. Turn on hot and cold water for one minute to flush out dirt and sediment that might have accumulated in lines during installation. Assemble aerator to spout.
7. Test spray rinse for proper operation and check all connections for leakage.
