Not only have people become extremely mobile, but also information technology. Information is now available at any time and place to those interested in it. Information exchange is taking place in all sectors of life and multimedia appliances are playing an ever increasing roll in this. Therefore flat-screen monitors have become almost obligatory in waiting rooms, reception halls, hotel lobbies as well as in conference and class rooms.

However, a flat screen LED, LCD or plasma TV simply hanging on a wall tends to lack elegance, in particular when the many cables used to connect other appliances are visible. The solutions currently adopted to conceal these cables do not normally render the installation more attractive.

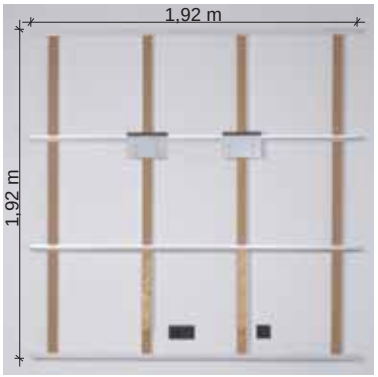
Using CINEWALL®, the innovative TV-panelling, installing a flat-screen TV on a wall becomes easy and versatile. The construction offers a well-organised and appropriate interconnection of various appliances and includes ideal cable concealment. The extrusions on either side can be removed and replaced, so that the decorative elements provided with CINEWALL® simply slide in and out if modification (addition, removal or replacement of appliances) to the electronic system is required.

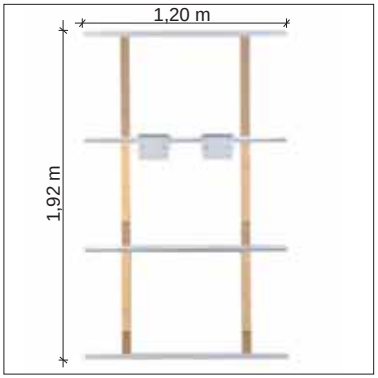
CINEWALL® comprises of various modules which can be combined with each other to yield a personalised result.

CINEWALL®

Wood Collection
Decor: Toledo with Light Set

CINEWALL® available in the widths 1.92m and 1.20m, offers over 200 colours in 6 collections. Your creativity has no bounds with the diverse surfaces and decors in wood, real leather, stone, glass, synthetic leather and varnished finishes. The wood collection is available from stock, whilst all other collections will be made to order and will require a moderate lead time.





The **Basis-Set** is the main component common to each wall and also contains all the accessories (including the basic TV bracket) necessary to finish the construction. The Basis Set is available in two sizes:
1.92m x 1.92m and
1.20m x 1.92m
(Width x Height)

Cinewall has been tested extensively for safety and usability according to DIN EN 14073, as well as for the current state of the art and carries the GS award.

The **Deko-Set** is available in 6 collections and contains the manufactured decorative panelling and accessories ready in the size required. The ends are finished with high quality extrusions also included in the package.

COMPONENTS

The **Mediaboard** set contains the material necessary to build a shelf in the identical décor or, if one prefers, in a contrasting décor. The Mediaboard is inserted in the rail fastening system under the flat-screen TV.

The **Mediabox 2** set and **Mediabox 4** set are also available in matching or contrasting decors and give the customer the possibility of having freestanding furniture units for their appliances below the TV. These units are also inserted into the rail fastening system.

If required, doors may be fitted to the **Mediabox 2/4**. The door sets include the appropriate hinges (270°), fastening elements and handles.

For the glass, real leather, stone and synthetic leather collections, we offer **Mediabox 2/4** with or without doors, alongside the wood and other varnish tones, in a silver varnish.

Swivel, tilt, pull out. Adjust you television to suit the optimal angle for your needs.

ACCESSORIES

In order to round up the elegance of the Cinewall® system, we offer decorative **Light Sets** which could be affixed to the sides behind the wall providing elegant lighting.

The **Light Sets** are available in various colours (red, yellow, blue and white).

The flat-screen TV may be adjusted to suit individual requirements using the CINEWALL® adjustable **TV bracket**. This bracket is available on demand and is not included in the basic set.

The possibilities for use of **Uni-Clips** are numerous, for example for the installation of loudspeakers. Pre-drilled holes simplify the installation of decorative elements and accessories. The clips are simply hooked into the rail fastening system.

The system allows one to integrate fittings like electrical sockets and switches, for example to control the indirect lighting. Countless off the shelf fittings could be integrated in the CINEWALL®.

ASSEMBLY

The wood components found in the **Basic Set** are affixed to the wall to form a framework. All the hardware needed, including the TV bracket are included in the package.

The advantage of CINEWALL® is that cables and wiring can be channelled through the gaps behind the panels to connect electrical sockets and low voltage wiring to electronic equipment. The 60mm gap between the wall and the panelling, enables one to use a multi-socket extension.

The pre-cut wall panels, found in the **Deko Set**, slide into the aluminium rails. Indirect lighting can be easily integrated and the Mediaboard or Mediabox sets can be built and hung onto the rail.

The panels are pushed in and out of the channels so that changes can be made easily. The CINEWALL® is finished with pre-cut extrusions on either side of the wall.

COLLECTIONS

The collections offer a selection of truly worthy backgrounds for every flat-screen. Here the inspiration and ideas were taken from the splendours of nature and art. And what could be the result of such an inspiration, if not a rich, impressive, elegant, exclusive collection.

The decorative variations inspired by nature are reflected in the stone, leather and wood collections composed of numerous shades and tones. In particular, the compact surfaces of CINEWALL® XS give off a genuine impression of warmth and style.

For the art and artistic impression enthusiasts, a wide range of synthetic leather, glass and varnished surfaces are available. With a modern flat-screen TV apparatus on these surfaces, one achieves rich aesthetic effects.

However, throughout the various collections, one finds numerous surfaces: noble single-tones, ornamental, glamour and glitter effect, splendid colours, safari-patterns, leather relief in crocodile, snake or ostrich skin effect, timber grain, structures, gold and silver, steel, mottled, shine and metallic effects.

A great advantage of the system is that the decorative elements can be exchanged at will. This enables the user to have different surfaces at different seasons or to opt for a different look at a later date.
